

URBAN CONCEPTS ENVIRONMENTAL POLICY

Urban Concepts recognises the importance of adopting a sustainable approach to business. We are committed to conducting business in a manner that minimises the impact on the environment by using preventative measures.

We employ sustainable practices in

- The administration of our business;
- Our methods of communication; and
- The production of our documents, flyers and reports.

We strive to operate our office sustainably and be environmentally conscious in our practices by aiming to reduce, reuse and recycle in every circumstance. We are continuously investigating methods of improving the sustainability of our company for the future.

At Urban Concepts, we encourage our clients, suppliers and specialist consultants to adopt policy positions which encourage sustainable practices in the operation of their businesses, and which do not limit the solutions available to the community to address climate change.

It is Urban Concepts position that Governments, businesses and the general community must accept responsibility for the current situation of environmental decline and act jointly and cooperatively to address it in a manner which provides future generations with the opportunity to enjoy the environment and the prosperity enjoyed by people in the 21st century.

Our aim is to:

- Reduce our consumption of electricity, water, paper and printing;
- Reduce our production of waste;
- Ensure that all measures are taken not to pollute our environment;
- Educate all employees about our environmental policy; and,
- Encourage and support contractors who share our commitment.
